Swami Vivekanand College of Nursing, Udgir

(Approved by Government of Maharashtra, Recognized by Indian Nursing Council, New Delhi and Maharashtra Nursing Council Mumbai)

Affiliated to Maharashtra University of Health Sciences, Nashik

Survey No. 184, Bodhan Nagar, Jalkot Road, Udgir - 413517 Dist. Latur

PH. 8208876474, Mail: svconudgir@gmail.com

Dr. Sudhir Jagtap (M.Sc. M.Phil, Ph.D.)
President

8.1.3: Students are exposed to quality of care and patient safety procedures including infection prevention and control practices as practiced by the teaching hospital in didactic and practical sessions during their clinical postings.

The best way to stop or slow the spread of infection in a hospital or work environment is through infection control.

The management keeps a careful eye on patient care to make sure that it is delivered to the greatest standards. Undergraduate and graduate students from our institute are exposed to a variety of hospital departments, including the OPD, wards, critical care units, cancer, and all super-specialty units. The opportunity for students to gain knowledge about how to offer patients with varied medical conditions high-quality care is a prized one. Personnel in the fields of medicine, nursing, and other allied health are appropriately qualified. Under the direction of teachers and nursing personnel, students can learn everything from the most basic nursing methods to the most advanced ones. Infections like ventilator-associated pneumonia (VAP), bloodstream infections (BSI), and catheter-associated urine incontinence are preventable by following the guidelines in the hospital's manual and standard operating procedures (SOPs).

Our students, who are trained to be fitness care workers, deal with the daily obstacles of preserving their surroundings, reducing the spread of microorganisms, and adhering to contamination control regulations and procedures, such as keeping dangerous methods to a minimum. Hepatitis B, tetanus toxoid (TT), and COVID-19 vaccinations are administered to all staff and students. The use of single-use disposable equipment, care when managing sharps, cleaning, applying safe work practices, accurate housekeeping, engineering, and Personal Protective Equipment (PPE) are all regularly simulated and taught.

The medical facility manual contains quite a few safety precautions, including those for patient safety, lab safety, radiography safety, emergency codes, disaster management, and safety precautions connected to equipment, gas, hazardous waste, waste disposal, and worker training.

During the Covid epidemic, the suspected Covid patients were admitted to the historic building, and the hospital provided PPE, reduced exposure time, a healthy diet, vaccinations, yoga, and Jalneti exercise to protect its staff and students. Covid pandemic protocols were developed and put into place at the group level, including maintaining physical distance through the use of online instruction, the usage of masks, and handwashing.

The framework connects the quality of care to specific patients, and we contend that this is where the concept of quality of care really comes into its own. Care for individuals must be considered in the context of providing healthcare for populations, which adds new ideas of efficiency and equity.
